

About Penso

Penso is a world leading manufacturing specialist, providing complete turnkey engineering services to customers across the globe.

We pride ourselves on pushing the boundaries of innovation from three state-of-the-art facilities in the UK and India, investing millions of pounds into new technology and in creating the highest skilled workforce in our industry. This allows us to offer the latest solutions in:

Consulting

Engineering services to all industries within the transport and mobility sectors

Composite Technologies

Medium to high volume composite manufacturing

Special Operations

Niche vehicle production and prototype builds

Consulting ■ Composite Technologies ■ Special Operations

Consulting

The Penso approach is to solve problems quickly and cost effectively for our clients.

£12m has been invested over the last 18 months in equipping our Coventry Headquarters with the latest CAD and Finite Element Analysis (FEA) software as well as manufacturing capabilities.

We offer consultancy services in:

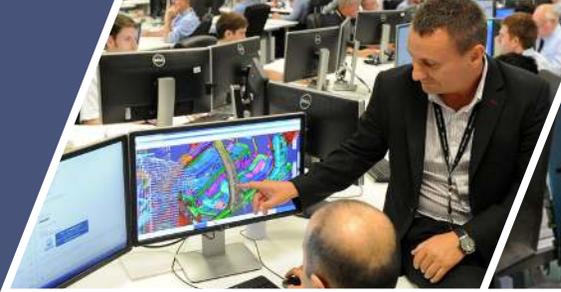

- Body Hardware
- Structures
- FEA Simulation
- Body-in-white
- Composites
- Exterior Trim
- Interior Trim

Special Operations

Penso is increasingly being chosen as a critical manufacturing partner for prototype work, low volume series production and niche vehicle assembly.

Our engineers can work from a clean sheet of paper or take existing designs and provide solutions for clients in:

- Automotive
- Aerospace
- Defence
- Marine
- Rail

CONSULTING

COMPOSITE TECHNOLOGIES

SPECIAL OPERATIONS

£7m

invested in a new state-of-the-art carbon fibre high volume production factory

88,000 sq ft

of dedicated manufacturing space across two facilities in the West Midlands

TS16949

and ISO9001 accredited, world class quality offered to every customer

“ We are passionate about engineering and delivering solutions to production issues that have the potential to change the world we live in.

Composite Technologies

Taking the weight out of the equation is one of the engineering sectors' biggest drivers and we are pioneering new engineering process and manufacturing solutions in this field.

Following years of sustained R&D, we have developed a process for producing carbon fibre components that offer better performance than their existing counterparts and can be produced in just minutes not hours.

This unique process is making the use of composite materials very competitive against the traditional steels, aluminium and mixed materials commonly used in the automotive and rail sectors.
